Redundancy and Fail-Over

CudaConnect Email Security is the most comprehensive and cost-effective way to protect your business against all of the threats associated with corporate business email.

Cloud Spam Filtering

CudaConnect Email Security is the most comprehensive and cost-effective way to protect your business against all of the threats associated with corporate business email. In a single solution, you get effective protection using 12 Defense Layers.

Mail Bagging

If your Primary Mail Server goes down, the email will be stored and queued using our Mail Bagging Feature until 72 hours and as soon as the Primary Mail Server is live again, the emails would be pushed to the Primary Mail Server.

Multiple Network Routes

You have the option to define more than one IP using different ISP or Links and if your Link is down or not available, it will re-route the messages using secondary IP/ISP.

Auto Spooling

There is no ETRN Scripting or POP or Domain POP or any fetching mechanism required to use our service, the MX Backup Monitoring will check to see if the Primary Server is live again, it will start pushing emails automatically.

LDAP & Microsoft Active Directory Integration

CudaConnect can easy connect to any Directory Services including LDAP - Light Weight Directory Access Protocol, Novel eDirectory Services, Domino Directory, and Active Directory methods.

Role-Based Administration

CudaConnect provides support native multiple levels of role-based administration: User, Helpdesk, Domain Admin and Auditor. Assigning and editing administration roles takes a only few moments through the web UI.

Secondary MX - Add Redundancy

If your Mail Server or Firewall or fails for any reason or is unavailable for any reason, your emails will be re-routed and will be delivered to the your Mail Server using the Secondary MX Firewall. The Backup MX service will continue to deliver cleaned emails to your mail server hence the continuation of your spam-blocking service and email flow will become

- 100% redundant.

Mail Server MX-Masking

The methods and resources available to conduct and mask such attacks have dramatically evolved to include distributed (DDoS) and, more recently, distributed reflector (DRDoS) attacks that simply cannot be addressed by traditional on-premise solutions. Cuda Connect Cluster technically masks your mail server to protect against any attacks and with MX-Masking features it provides you an additional level of protection.

Central Management

The CudaConnect is a cloud-based portal that makes managing multiple Barracuda Spam and Virus Firewalls simple and straightforward using Barracuda API Connector to allow you to have DATA CENTERS, Service Providers, Devices and Inventory and Individual Device Control at the lower level too.

Cloud Spam with Redundancy and Fail-Over and Mail Bagging

CudaConnect Email Security is the most comprehensive and cost-effective way to protect your business against all of the threats associated with corporate business email.
